

ModelSnapshot

```
classDiagram
    class ModelSnapshot
    class Mediatype_Server_Migrations_IdentityData_IdentityDataContext {
        # BuildModel()
    }
    Mediatype_Server_Migrations_IdentityData_IdentityDataContext --|> ModelSnapshot
```

The diagram illustrates a class hierarchy. At the top is a class box for 'ModelSnapshot', which is divided into three horizontal compartments. The top compartment contains the class name, while the other two are empty. Below it is a larger class box for 'Mediatype.Server.Migrations.IdentityData.IdentityDataContext', which is shaded gray and also divided into three horizontal compartments. The top compartment of this box contains the class name and the method '# BuildModel()'. The middle compartment is empty. The bottom compartment contains the text '# BuildModel()'. A blue arrow with an open triangular head points from the top edge of the 'Mediatype.Server.Migrations.IdentityData.IdentityDataContext' box to the bottom edge of the 'ModelSnapshot' box, indicating that the former inherits from the latter.

Mediatype.Server.Migrations.
IdentityData.IdentityDataContext
ModelSnapshot
