

ControllerBase

```
classDiagram
    class ControllerBase
    class UsersController {
        + UsersController()
        + GetUserList()
        + GetMyUser()
        + GetUser()
        + SetUser()
        + GetUserFormation()
        + RegisterUserformation()
        + DeleteUserFormation()
        + DeleteUser()
        + ExportCalendar()
    }
    UsersController --|> ControllerBase
```

The diagram illustrates a class hierarchy. At the top is the 'ControllerBase' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. A blue arrow with an open triangular head points upwards from the 'UsersController' class to the 'ControllerBase' class, indicating inheritance. The 'UsersController' class is shown as a rectangle with three compartments. The top compartment contains the namespace and class name 'Mediwatch.Server.Controllers. UsersController'. The middle compartment is empty. The bottom compartment is shaded gray and contains a list of public methods, each preceded by a '+' sign.

Mediwatch.Server.Controllers.  
UsersController

- + UsersController()
- + GetUserList()
- + GetMyUser()
- + GetUser()
- + SetUser()
- + GetUserFormation()
- + RegisterUserformation()
- + DeleteUserFormation()
- + DeleteUser()
- + ExportCalendar()
